

BOOSTER PUMP QUESTIONS

Are you on city or well water?

What is the pipe material in your home or business?

What is the pipe size in your home or business?

Do you know the current Gallons Per Minute you are getting?

How many floors in your home or business (including basement)?

How many bathrooms are in your home or business?

Do you have standard shower heads or multiple shower heads?

Do you have a water softener?

Do you have a water filtration system?

Do you have a tankless water heater?

Do you have irrigation?

Do you know your current PSI?

Most of these questions will need to be answered in order to properly size a Booster Pump System.

If you have a unique situation our engineers will custom design a system specifically tailored to your needs.
